

# 2014 STATEWIDE WASTE CHARACTERIZATION STUDY

Summary of CalRecycle's Presentation of Highlights and  
Initial Results & 2014 Diversion and Disposal Rates

# PRESENTATION OUTLINE

- Overview
  - What is a waste characterization study?
  - Methodology
  - Main tasks
  - Previous statewide studies
- Part 1: Generator Based Study
- Part 2: Statewide characterization of disposed waste by sector

# OVERVIEW: WASTE CHARACTERIZATION METHODOLOGY

- Determine what's placed in discard streams –disposal, recycling, composting
- Determine types and amounts of paper, food, glass, metal, etc. in each stream
- Field sampling and sorting of materials, and other field measurements
  - Once samples are taken from desired stream:
    - Sort materials
    - Record weights
    - Collect other data such as source of waste, volumes, etc.
    - Compile and analyze data
    - Report results

Two methods used in 2014:

- **Facility based method**
  - take samples of materials at sites where they are delivered, such as landfills or transfer stations
- **Generator based method**
  - take samples of materials at sites where they are generated, such as businesses or households

# OVERVIEW: MAIN TASKS

- **Task 1: Disposal Facility-based Waste Characterization**
- **Task 2: Generator-based Characterization of Commercially Disposed Waste**
- **Task 3: Assess Overall Performance of Commercial Source Separation Systems using Generator Sampling**
- **Task 4: Collect Comprehensive Diversion Data from Business Groups**

## **Business Participation**

- Businesses were contacted by CalRecycle or its contractor, Cascadia Consulting Group, Inc. **Identities of all businesses that participated in this study are confidential.**

## **Disposal Facility Participation**

- Disposal Facilities were randomly selected across California to participate in the study. Different facilities were selected for the Generator-based and the Disposal Facility Waste Characterization Study depending on the study demands and the facility operations.

# OVERVIEW OF THE 2014 STUDY

Two main studies:

- Generator based characterization of the commercial waste by 16 business groups and multifamily waste, both disposal (Task 2) and diversion (Task 4)
  - included special data collection and analysis to assess overall recovery of materials through source separation -Task 3 (related to mandatory commercial recycling and MRF processing)
- Statewide characterization of disposed waste by sector
  - repeat of 2008 study, facility based sampling (Task 1) (Statewide data not presented yet)

# **PART 1:**

# **GENERATOR BASED STUDY**

- Disposal Study (Tasks 2) and
- Comprehensive Diversion Study (Task 4)

# PRE-FIELD WORK – BUSINESS GROUPS

- Select business groups based on Federal North American Industry Classification System (NAICS) Codes
  - Focus on business types that are major employers in CA
  - Group business types with similar waste streams (like office-type businesses)
  - Separate large organics generators
  - Group businesses that have smaller employment and atypical waste streams (like utilities, mining, pipeline transportation)

Arts, Entertainment & Recreation	Manufacturing - All Other	Services - Management, Admin., Support, Social
Durable Wholesale & Trucking	Medical/Health	Services - Professional, Technical, Financial
Education	Public Administration	Services - Repair and Personal
Hotels/Lodging	Restaurants	Not Elsewhere Classified
Manufacturing - Electronic Equipment	Retail Trade - Food & Beverage Stores	Multifamily
Manufacturing - Food; & Nondurable Wholesale	Retail Trade - All Other	

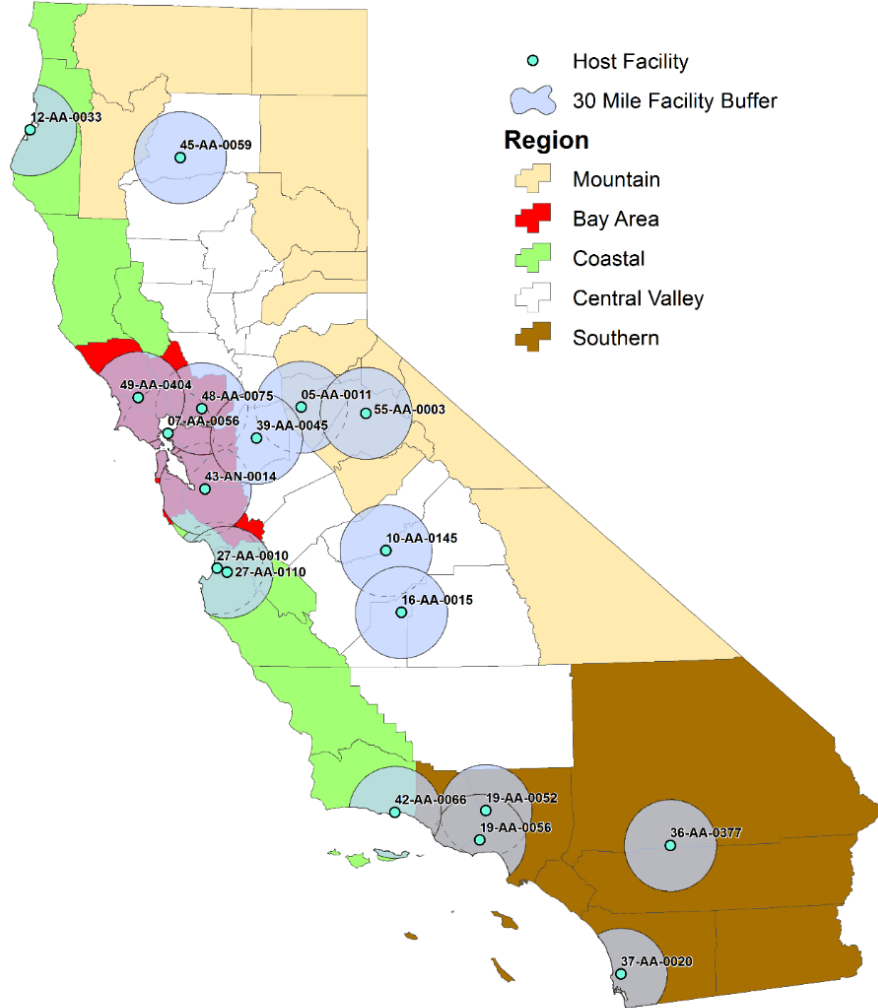

# PRE-FIELD WORK –SAMPLING PLAN

- 850 Disposal Composition Samples
  - 50 businesses or multifamily sites per group
- 430 Diversion Composition Samples (all diversion was measured)
  - 25 businesses per group, but 30 for multifamily; chosen randomly from the 850 used for disposal sampling
- 230 sites for special analysis of source separation programs
  - analyzed “bin-based” recycling/ composting only; chosen randomly from the 450

# PRE-FIELD WORK –SAMPLING AREAS AND BUSINESS RECRUITMENT

- Used same regions as previous studies
  - 4 sampling areas per region –20 total
  - Sampling area “nodes” based around solid waste facilities for sorting and disposal of samples
- Gracious cooperation by facilities to be “base camps” for sorting
- Sampling occurred during 4 seasons –really, every month of the year
- Business lists from each node used to randomly call and recruit business sites
- 3 sites identified:
  - Chiquita Canyon Landfill
  - Calabasas Landfill
  - MarBorg C&D Recycling and Transfer Facility (Santa Barbara)

# FIELD WORK FOR GENERATOR BASED SAMPLING

## **Generator Waste and Diversion Characterization**

- Measure amounts of materials present in bins
- Take samples
- Transport and sort waste samples at solid waste facility
- Sort recyclables on-site
- Also gather information on diversion apart from recycling/organics bin service
- Record all field data

# RESULTS:

## Generator Disposal Study

889	Businesses and Multifamily Sites Sampled
1.13	TPEPY
16.5 million tons	Commercial Waste Disposed

# RESULTS:

## Commercial Diversion Study

481	Businesses and Multifamily Sites Sampled
1,144	Material Streams sampled
0.64	TPEPY
9.4 million tons	Commercial Waste Diverted

■ Curbside Recyclable ■ Compost/Mulch ■ Other Recyclable ■ Recoverable Inerts ■ Other Materials

Percentage reflects the proportion of overall commercial sector generation

36%

Commercial Diversion Rate

15%

Multifamily Diversion Rate

	2013 Statewide Employment	% of Statewide Employment	Rank by Employment
Services - Professional, Technical, & Financial	2,141,914	15%	1
Services - Management, Administrative, Support, & Social	2,034,556	14%	2
Medical & Health	1,491,950	10%	3

Over 69% of Services - Professional, Technical, & Financial Disposed waste is recoverable.

	Tons Disposed	% of Comm. Disposal	Rank by Tons Disposed
Services - Professional, Technical, & Financial	3,994,643	24%	1
Restaurants	2,876,653	17%	2
Retail Trade - All Other	2,433,989	15%	3

Arts, Recreation, and Entertainment has the highest disposal rate of 2.56 TPEPY.

These two groups are achieving 80% Diversion mostly through Other Diversion streams.

## How Businesses Rank Up

	Tons Diverted	% of Comm. Diversion	Rank by Tons Diverted
Retail Trade - Food & Beverage Stores	1,868,403	20%	1
Durable Wholesale & Trucking	1,538,803	16%	2
Services - Management, Administrative, Support, & Social	1,417,462	15%	3

Retail Trade – Food & Beverage Stores has the highest diversion rate (5.43 TPEPY) and the highest generation rate (6.64 TPEPY).

	Tons Generated	% of Comm. Generation	Rank by Tons Generated
Services - Professional, Technical, & Financial	4,944,512	19%	1
Restaurants	3,494,479	13%	2
Services - Management, Administrative, Support, & Social	2,932,129	11%	3

Restaurants are diverting 10% of food waste.

# ASSESSMENT OF RECOVERY THROUGH CURBSIDE RECYCLING AND ORGANICS PROGRAMS (TASK 3)

- Data is for commercial sector and multifamily as a whole, not by business group
- Composition and quantities in disposal, recycling, and organics bins
- Used subset of businesses and multifamily sites recruited for Tasks 2 & 4  
–but only those with curbside diversion programs
- “Other Diversion” through other means was not included
- State of contamination of recyclables was assessed
- Results from Task 3 will be different from Tasks 2 & 4 results

# TASK 3 RESULTS –ASSESSMENT OF CURBSIDE DIVERSION

- 23 % of materials flow to recycling and organics bins

Annual Tons by Waste Stream:  
Task 3 Generator Sites

# ASSESSMENT OF CURBSIDE DIVERSION (CONT.)

- Much of what's still disposed could go into one of the other bins

Recoverability by Stream:  
Task 3 Generator Sites

# **GENERATOR BASED STUDY: ASSESSMENT OF CURBSIDE DIVERSION (CONT.)**

- 13 million tons generated
- 10 million tons in the disposal stream
- 4 million tons of clean, potentially recoverable materials were found in disposal bins
- Of the common recyclables and organics assessed, an estimated 30% was actually recovered
- Biggest potential to increase recovery are in food waste, compostable paper, and clean recyclable paper placed in disposal bins

# **PART 2:**

# **STATEWIDE CHARACTERIZATION OF**

# **DISPOSED WASTE BY SECTOR**

- Facility-based sampling (Task 1)

# **TASK 1: STATEWIDE CHARACTERIZATION OF DISPOSED WASTE BY SECTOR**

## **STATUS: Data Analysis Not Quite Complete**

- All field sampling, sorting, and surveys required by the study are complete
- Results for statewide tons assigned to each sector (residential, commercial, self-haul) need to be confirmed
- CalRecycle staff will present final results this summer
- Stay tuned.....

# 2014 STATEWIDE PER CAPITA DISPOSAL, DIVERSION, AND RECYCLING RATES

# Statewide Population & Employment

(Millions)

# Statewide Average Per Capita Disposal

(Pounds per day)

# Statewide Diversion Rates

(Percent)

# Statewide Disposal

(Millions of tons)

# 2014 STATEWIDE PROGRESS

## **Per Capita Disposal**

- 4.5 lbs/resident/day
- 10.6 lbs/employee/day

## **Diversion Rate Equivalent**

- 65% (Resident)
- 66% (Employee)

## **Recycling Rate**

- 50%
